DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 3-5, and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Anderson (3,298,677). Note a suction pipe 12 for an air intake system having a shoulder near 10, a flow surface comprising a surface of a flap 16 arranged rotatably in the suction pipe, the slow surface having surface irregularities in the form of elevations and/ or depressions 32, 36, 38, and 42, which have different shapes (36 is different from the others) in order to reduce flow breakaway and vortex formation, the irregularities in the form of shark scales.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 2, 6, 8, 9, and 11-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Anderson (3,298,677). Anderson shows everything except the depressions being formed in the manner of a golfball profile, the flap being made of plastic molding, the flow surface comprising the wall of the suction pipe, and the manner

Application/Control Number: 10/756,910 Page 3

Art Unit: 3747

of producing the irregularities. It would have been obvious to one having ordinary skill in the art to employ a flap made by plastic molding, since this is conventional. In addition, it would have been obvious to one having ordinary skill in the art to utilize depressions formed in the manner of a golfball profile in lieu of the shark scales profile, and to employ the flow surface on the wall of the suction pipe in lieu of on the flap, since these are art recognized alternatives, as evidenced by Applicant's claiming all these alternatives. Finally, the process of producing a product is not given weight, as per MPEP: "When the reference teaches a product that appears to be the same as, or an obvious variant of, the product set forth in a product-by-process claim although produced by a different process. See In re Marosi, 710 F.2d 799, 218 USPQ 289 (Fed. Cir. 1983) and In re Thorpe, 777 F.2d 695, 227 USPQ 964 (Fed. Cir. 1985). See also MPEP § 2113."

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Marguerite J. McMahon whose telephone number is 703-308-1956. The examiner can normally be reached on flex.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Yuen Henry can be reached on 703-308-1946. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
